Key Findings (Data Snapshot – 2 514 reviews)

Finding	
1	App-name concentration: The top five apps (Reddit, Pinterest, Google Drive, OneDrive, MX Player) account for ~30 % of all reviews. These are the most talked-about and likely generate the bulk of revenue.
2	High engagement in “Entertainment” & “Navigation”: Ratings for Entertainment apps average 3.4 vs 2.8 for Health & Fitness; yet Entertainment receives 167 reviews, Navigation 161 – a strong demand signal.
3	Ad-heavy complaints drive low ratings: The most frequent review text (“Great app but too many ads...”) is linked to lower mean rating (≈ 2.9) and fewer helpful votes, indicating that ad saturation hurts perceived value.
4	Geographic hotspots: Australia, Germany, Turkey, Indonesia, Italy together represent ~25 % of reviews; these markets show higher average ratings (3.6–3.8) than the global mean (3.02).
5	Device-type parity: Windows Phone and Android dominate (~1 000 reviews each), but iOS/iPad users produce slightly higher ratings (≈ 3.2 vs 2.9 on Android).

Correlations & Seasonality

- **Rating ↔ Helpful Votes** – Boxplots show a clear positive trend: apps with >600 helpful votes average ~3.5 rating, while those <200 hover around 2.7.
- **App-category × Rating** – Entertainment and Navigation consistently outperform Health & Fitness by ~0.4 points.
- **Device × Rating** – iOS/iPad users rate higher than Android/Windows Phone users, suggesting a willingness to pay more on Apple devices.

- **Seasonality (assumed)** – The data covers a 3-month window; the spike in reviews for “Travel & Local” during July–August hints at summer travel season driving demand.

Actionable Revenue-Optimization Recommendations

#	Recommendation	Why it matters	Quick win
1	Introduce a tiered pricing model for top apps (Reddit, Pinterest, Google Drive). Offer a free
